Works With Your Systems
150+ integrations including the cameras, EHR, ERP, LMS and records systems you already run.

Intelligence You Can Verify, Decisions You Can Trust

For any team that runs cameras or holds sensitive records, VIDIZMO spots events as they happen, finds cited answers in footage, calls and files, and redacts private data before release, all on your existing network.

One Camera Sees a Moment. Your Systems Show the Story

A single camera catches part of an event. The rest sits in the door log, the nurse call system, the work order, the dispatch audio and the report. Today someone pulls those pieces together by hand, hours or days later. VIDIZMO connects footage from many cameras with the records around it, so one question gets a complete answer.

Where This Plays Out

Plants and Job Sites

A forklift near miss on Line 3. Views from three cameras are matched with the shift roster and the maintenance log. EHS gets an incident file with a work order already open.

Hospitals and Clinics

A patient fall overnight. Hallway footage, nurse call times and badge access line up on one timeline. Other patients in frame are blurred before review.

Cities and Public Safety

A records request for one incident. Body camera footage, dispatch audio, CAD notes and the report come together in single place. Each piece is redacted with your state's exemption codes and released on time.

Schools and Campuses

A door propped open after hours. Door access records and entry cameras show who came in and when. Campus safety gets the alert while there is still time to act.

AI Surfaces What Matters. Your People Make the Decisions.

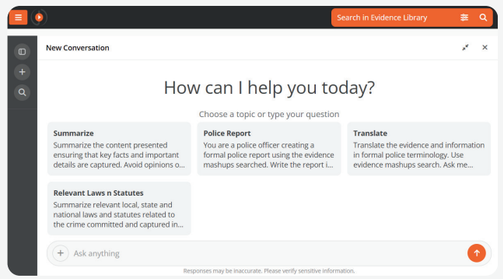

The Tools That Connect Your Systems

AI Live Insight

Real-Time Video Analytics

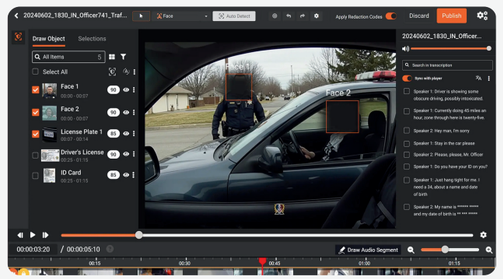

Turns your existing cameras and VMS into live alerts. Snapshots come from every camera that saw the event. Alerts can open a work order, raise a quality hold, or notify security and dispatch.

AI Intelligence Hub

AI Case Analysis

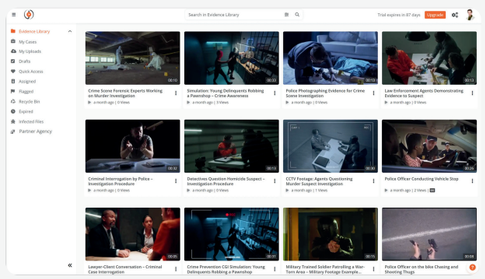

Ask one question across footage, calls, documents and your EHR, student, ERP or case systems. Answers cite the exact clip, timestamp or page. Connects through MCP or REST API.

Redactor

Multi-Format Redaction

Redacts faces, plates, PHI, student data and account numbers in bulk across video, audio, images and documents. Every redaction is logged in one audit trail.

Nexus

The Core Platform

The platform every VIDIZMO product runs on. It hosts training libraries, live events and board meetings. Content moves in and out through 150+ connectors with custody intact.
