VIDIZMO.AI

K-12, HIGHER EDUCATION AND LIBRARIES

Unified Campus Intelligence, Cited to the Source

Districts, colleges and libraries keep footage in the VMS, records in the SIS, and course content in the LMS. VIDIZMO works with the systems you already run, connects what each one holds, and gives answers cited to the source, all on your own network.

HOW IT WORKS

One System Rarely Tells the Whole Story

A camera shows what happened, the access control log shows who came in, and the SIS shows which students were scheduled there. VIDIZMO lines these sources up so one question gets one complete answer, with every claim linked back to the exact clip, page or record.

SAFETY

School Safety

A door propped open after hours is rarely caught on one camera. Footage from several cameras lines up with access control and visitor management logs on one timeline. Campus safety or the School Resource Officer gets the alert while there is still time to act.

PRIVACY

FERPA and Records Requests

A parent or attorney requests footage of one incident. The video, the incident report and the related emails come together in one package. Other students are redacted across all of it to meet FERPA, and each step is logged.

LEARNING

Lecture Capture and Learning

A student asks a question and gets an answer that cites the lecture recording, the slides and the syllabus together. Lectures are captioned for ADA and Section 508 accessibility and stay searchable inside your LMS.

GOVERNANCE

Board Meetings and Professional Development

Board of Education meetings stream live and are archived with searchable transcripts. PD libraries track completions. One question can pull the board policy, the PD session that covered it and the meeting where it was approved.

AI Live Insight
Live alerts from the cameras you already have

AI Intelligence Hub
Cited answers across every source

Redactor
Student PII removed across video, audio, documents and images

Nexus
One platform, 150+ connectors, one chain of custody

INTEGRATIONS

Built On What You Already Run

Nexus, the platform every VIDIZMO product runs on, connects your existing cameras and VMS, access control, visitor management, SIS, LMS and identity systems through 150+ connectors, or any system with an MCP server or REST API. Connecting these systems is what lets one question return a complete, cited answer.

Deploy anywhere: On Premises · Hybrid · Gov Cloud · Air Gapped

SECURITY AND PRIVACY

ISO/IEC 27001 certified. Architecture aligned with FERPA, NIST and state student data privacy requirements.
