VIDIZMO.AI

HEALTHCARE AND LIFE SCIENCES

Clinical, Compliance and Training Intelligence You Can Trust and Verify

Health systems, practices and life sciences teams hold sensitive video, audio and documents in many places. VIDIZMO works with the systems you already run, connects what each one holds, and gives answers cited to the source, all on your own network.

HOW IT WORKS

One Source Rarely Tells the Whole Story

Footage shows what happened, the EHR shows who was involved, and the policy shows what should have happened. VIDIZMO lines these sources up so one question gets one complete answer, with every claim linked back to the exact clip, page or record.

PATIENT SAFETY

Patient Safety and Protective Services

A fall or a workplace violence event is rarely caught on one camera. Footage from several cameras lines up with weapons-screening alerts, badge access and nurse call times on one timeline, so security and risk teams see the whole event as it happens.

PRIVACY

Records Release and Research

A request covers one patient's incident. Footage, the incident report, call recordings and imaging come together in one package. Faces, voices and PHI are redacted across all of it, and each step is logged.

PHARMA

Pharma Compliance and Revenue Teams

A pricing or contract review gets checked against the recorded negotiation, the contract and the government program terms. Reviewers get one answer that cites all three, with access controls and an audit trail of who saw what.

TRAINING

Clinical, CME and Sales Training

A clinician or sales rep asks a question and gets an answer that cites the training video, the SOP and the latest policy together. Libraries stay searchable, completions are tracked, and outdated content is easy to spot.

AI Live Insight
Live alerts from the cameras you already have

AI Intelligence Hub
Cited answers across every source

Redactor
PHI removed across video, audio, documents and images

Nexus
One platform, 150+ connectors, one chain of custody

INTEGRATIONS

Built On What You Already Run

Nexus, the platform every VIDIZMO product runs on, connects your existing cameras and VMS, EHR, PACS, LMS, CRM and identity systems through 150+ connectors, or any system with an MCP server or REST API. Connecting these systems is what lets one question return a complete, cited answer.

Deploy anywhere: On Premises · Hybrid · Gov Cloud · Air Gapped

SECURITY AND PRIVACY

ISO/IEC 27001 certified. Architecture aligned with HIPAA, NIST and GDPR requirements.
