

Managing Videos Made Simple and Hassle-Free

VIDIZMO EnterpriseTube

A Consolidated Solution For Streaming Video And Managing Your Digital Media

EnterpriseTube is an enterprise video streaming and digital Content Management System (CMS) with enterprise-class security and smooth content delivery for a broad range of playback devices under all bandwidth conditions in a YouTube like responsive, multilingual, multi-channel and brandable user-interface (UI).

EnterpriseTube is deployable on a public or government cloud, on-premise or in a hybrid deployment model, delivers video & other digital content securely, and integrates seamlessly with applications such as LMS, CMS and video conferencing systems to securely store, manage, edit and share digital content with internal and external audiences.

The Need for EnterpriseTube

Law enforcement agencies are often met with the challenge of training new recruits. In efforts to gain immense public trust and create a safe environment for the people, the need for training increases exponentially. However, training new recruits for such a crucial job is quite challenging. For new recruits to grasp the extensive training material more effectively, it is important to enhance their level of involvement and engagement.

Creating engaging content for training is not enough. An effective video content management system ensures increased content engagement to capitalize on its training efforts. Through a host of interactivity features, an advanced video content management system addresses this significant challenge.

How VIDIZMO EnterpriseTube helps

With VIDIZMO EnterpriseTube, law enforcement agencies leverage a wide range of interactivity features, including the ability to add quizzes, survey forms, handouts, and more. Moreover, law enforcement agencies can monitor the results of quizzes and issue completion certificates to successful candidates. This way law enforcement agencies not only ensure user engagement but also receive greater training and learning ROI.

Key Benefits

- ✓ Effectively manage video and other digital media content on a centralized platform.
- ✓ Store digital media on a highly secure, CJIS-compliant media management platform.
- ✓ See how your media is performing through granular level media analytics.
- ✓ Increase user engagement through a variety of interactivity features such as quizzes, handouts, etc.

Key Features

VIDEO-ON-DEMAND

Take advantage of browser compatibility, support for various video formats, and automatic video encoding and transcoding to ensure smooth playback.

LIVE STREAMING

Live stream videos seamlessly to a massive audience, no matter where they are. Embrace a hassle-free approach to live streaming through adaptive bitrate (ABR) streaming.

ANALYTICS AND REPORTING

Assess how your videos are performing through dashboards and get insights into which videos are more popular, who watched what, and other reports.

AUTOMATIC TRANSCRIPTION

Remove language barriers to connect with a geographically and culturally dispersed audience with AI-powered automatic transcription for greater content accessibility.

SECURE ACCESS AND SHARING

Manage access to your portal through role-based access control, and SSO. Share videos publicly or privately using limited sharing and tokenized URLs.

VIEWER INTERACTIVITY

Engage with the audience by adding in-video quizzes, survey forms, and handouts on a centralized, fully brandable platform.

INTELLIGENT SEARCH

Search for videos through names of speakers, objects inside the video, spoken content, topics covered, and brands found in the video.

SEAMLESS INTEGRATION

Integrate with videoconferencing platforms like Zoom and Webex, learning management systems (LMS), and web analytics platforms.
