

One Platform to Hide What Matters and Hand Over the Rest

For public safety teams who live under FOIA clocks and privacy laws, leaving faces, license plates, or other personally identifiable information (PII) exposed is no longer an option.

VIDIZMO Redactor lets you scrub every sensitive pixel, word, and page, then keep both the redacted and original files locked away in the same place. No more juggling point tools or copying evidence across drives.

Our Customers

Why Agencies Pick VIDIZMO Redactor First

Works on **Every File** You Touch

Video, 911 calls, scanned docs, license plates, weapons, body-cam footage, and even MDT screens. One upload, one process.

Automated Detection Does the Heavy Lifting

The system spots faces, license plates, weapons, screens, and spoken PII, so you review, not draw boxes manually.

Keep **Chain of Custody** Intact

Original and redacted versions are stored side-by-side inside the platform with full audit history that cannot be tampered with.

Built for **Public Records** Pressure

Bulk-redact hundreds of thousands of files in a single run and hit statutory release deadlines without overtime.

Deploy **On-prem** or **GovCloud**

Meet CJIS, HIPAA, FERPA, FOIA, and other strict mandates without shipping data to “someone else’s” servers.

Ingest

01

Drag and drop any file. The platform hashes and stores the original evidence.

02

Detect

Computer vision and speech AI flag faces, plates, screens, weapons, and spoken PII.

How It Works

Review

03

Toggle objects on/off or draw manual masks for precise human-in-the-loop redaction.

04

Export

Click **Redact** to generate a redacted copy in the same case folder.

Ready to **Replace Risk** with Confidence?

Request a free trial today and run your own files through VIDIZMO Redactor.
