

AI-Powered Redaction Software to Navigate Data Privacy and Compliance Challenges

VIDIZMO Redactor

Protecting Sensitive Information.
Swiftly and Accurately.

VIDIZMO Redactor enables you to protect personally identifiable information (PII), protected health information (PHI), business identifiable information (BII), trade secrets, sensitive but unclassified (SBU) information, and classified information. With VIDIZMO Redactor's advanced Artificial Intelligence (AI) capabilities, protecting sensitive information is no longer a hassle.

The Need for Redaction

The proliferation of body-worn cameras and in-car videos has ushered in a new era of digital content. However, this abundance of data also brings forth the challenge of safeguarding sensitive information. The process of redacting hours of media evidence, such as CCTV footage or body-worn camera recordings, can be a demanding endeavor, placing a strain on both time and resources. Moreover, the ever-evolving landscape of privacy and safety regulations further adds to the complexity, requiring organizations to stay compliant with the latest requirements.

To overcome these obstacles, the automation of video and audio redaction offers a transformative solution. By leveraging advanced technology, organizations can streamline the redaction process, eliminating the need for arduous manual efforts. This not only increases efficiency but also enables agencies to respond promptly to Freedom of Information Act (FOIA) requests.

How VIDIZMO Redactor Helps

With VIDIZMO Redactor, organizations are able to save their precious time, meet their request processing deadlines, and significantly enhance the redaction accuracy by leveraging advanced Artificial Intelligence (AI) capabilities, such as automated redaction and bulk redaction.

Key Benefits

- ✓ Effectively protect sensitive information from getting into the hands of malicious actors.
- ✓ Steadily comply with privacy regulations, including the Privacy Act, FOIA, FIPS, GDPR, CJIS, HIPAA, FERPA, and others.
- ✓ Timely respond to FOIA requests by automating the redaction of sensitive information.
- ✓ Significantly enhance accuracy in redacting sensitive information from videos, audio, images, and documents.

Key Features

VIDEO AND IMAGE REDACTION

Redact videos and images by automating the detection of faces, people, license plates, vehicles, and weapons.

DOCUMENT REDACTION

Hide sensitive information from Microsoft Office and PDF documents through keyword and pattern redaction.

BULK DOCUMENT REDACTION

Redact multiple documents in a single go and save your time and efforts with bulk document redaction.

OPTICAL CHARACTER RECOGNITION

Redact scanned and handwritten documents through keyword and pattern redaction using regular expressions.

AUDIO REDACTION

Mute or bleep personal identifiers and sensitive information found within audio recordings.

OBJECT DETECTION

Automatically detect faces, people, license plates, vehicles, and weapons in videos and images.

VIDEO EDITING

Remove sections from the video that contain personal identifiers or other sensitive, critical information.

REDACTION COPY

Preserve the original, unredacted file as VIDIZMO Redactor automatically creates a separate redaction copy.
